RE:  Pre-Submission meeting to discuss clinical study augmented with virtual patients

To Whom It May Concern:

This pre-submission provides FDA with an overview of a hypothetical Bayesian clinical study using virtual patients as prior information. This work is part of the mock IDE submission project sponsored by the Medical Device Innovation Consortium (MDIC), and has been previously discussed as part of the informational meeting Q150804, held on July 14, 2015 and pre-submission meeting Q150804/S001, held on December 15, 2015.

The virtual patient model incorporates in-vitro test data, in-vivo use condition measurements, and a statistical reliability projection methodology, to predict the survival of a hypothetical ICD lead. The clinical study incorporates this virtual patient data as an informative prior, with a loss function that adjusts the weight of the prior based on agreement between the virtual and real patients.

The sponsor team requests feedback from FDA on the following two questions:

1. Is the study design acceptable for the specific context of lead failure due to intracardiac conductor fractures, given the assumptions associated with this mock submission framework?

2. Is the virtual patient model discussed in Q150804/S001 suitable as an informative prior for the proposed study design?

The sponsor team requests a one hour face-to-face meeting with FDA, and will work with FDA to schedule this meeting once the review team has been identified.

Sponsor Information:

Name: Medical Device Innovation Consortium
1550 Utica Avenue South, Suite 740
St. Louis Park, MN 55416
952-314-1255
